Argonne National Laboratory  
Center for Nanoscale Materials  
9700 S. Cass Ave., Bldg. 440  
Argonne, IL 60439

Ph.D., Physical Chemistry,  
Massachusetts Institute of Technology

### **Research summary:**

Our group objective is to achieve control of optical energy and its conversion on the nanometer scale by combining the properties of metal, organic, semiconductor, and dielectric materials to create new, hybrid electronic and optical states. My current research focuses on (a) ultrafast excitation processes in hybrid nanomaterials, (b) nanophotonic structures for the concentration and conversion of solar energy, and (c) the visualization of nanoscale optical phenomena.

### **Awards:**

- 2013 Argonne National Laboratory Distinguished Service Award
- 2005 Argonne National Laboratory Director's Award
- 2004 Argonne National Laboratory Pacesetter Award
- 1998 Presidential Early Career Award for Scientists and Engineers (PECASE)
- 1998 Department of Energy Young Scientist Award
- 1996 R&D 100 Award for development of a Photorefractive Image Processor
